Application Note: Recommended Sequence for Powering RFM96 and TM32 Wireless Modems

To avoid potential malfunction of your RFM96 and TM32 Wireless Modems, follow the following sequence:

1. Connect antenna to antenna port
2. Apply power to unit
3. Wait 2 seconds
4. Apply data to serial port

If data appears at the serial port while the RFM96 or TM32 is initializing, this data may be interpreted by the radio modem firmware as a command, causing unpredictable results. Should this happen, remove data and power supply, and re-apply power following the sequence above.
